

PRESENTING  
World's first  
**MOTION DD** Direct Drive

# CARE FOR YOU. CARE FOR YOUR CLOTHES.

Now give your clothes a wash that's BETTER THAN HAND WASH.

India's No.1<sup>+</sup>  
WASHING MACHINE

LG Front Loading Washing Machines.

Life's Good when you enjoy complete care.

An evolution in washing.  
A revolution in life.

At LG, we keep presenting newer and better technologies, everyday, to strengthen our relationship with our beloved customers. Ten years back when the world was still learning about front loading washing machines, we introduced Inverter Direct Drive, and with its silent wash we gave our customers complete peace of mind. Maintaining the tradition of staying ahead, may we present the most advanced technology in washing machines - 6 Motion Direct Drive. With a combination of six different washing motions, these smart washing machines understand the type of cleaning required according to the type of fabric and offer a wash that's better than hand wash. Bring home the utmost care and hygiene with a revolutionary washing machine.

# World's first **MOTION DD** Direct Drive in LG Front Loading Washing Machines

Inverter Direct Drive  
Motor is directly  
attached to the drum.

Smart Technology  
To the existing technology we  
added more brains and a smart  
processor that senses the type of  
cleaning required.

6 Motion Direct Drive  
Motor is directly attached  
to the drum and smartly  
creates a combination of  
6 motions to suit the type  
of wash you choose.

# Better Technology. Better Wash.

INVERTER DIRECT DRIVE TECHNOLOGY  
Less Noise. Less Vibration. More Durability.

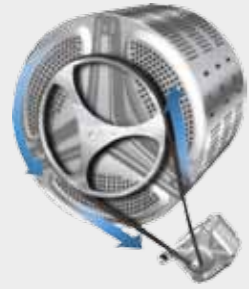

What is Inverter Direct Drive Technology?

LG Inverter Direct Drive is a unique technology that'll become the talk of the town, for its silence. In this, the motor is attached directly to the drum, thus eliminating the belt and the pulley. This smoothens the engine and the drum movement, causing less vibration and less frictional noise. This silent but steady technology, delivers power directly to the drum, ensuring a quieter and more efficient wash. Also, it does not require a belt replacement from time to time.

Inverter  
Direct Drive

## CONVENTIONAL MOTOR

UNIVERSAL MOTOR

BELT

PULLEY

DRUM

- Unpleasant noise and vibration.
- Wear-out of belt and its frequent replacement.

## 6 MOTION DIRECT DRIVE

DD MOTOR

DRUM

The motor is directly attached to the centre of the drum:

- Increased Stability, Minimal Vibration.
- No frictional noise.
- Increased Durability, fewer moving parts.
- Increased Energy Efficiency, direct power to drum resulting in no loss of energy.
- Better care for clothes.
- Amazing washing performance.

## LG Direct Drive Motor - Long life assurance, certified.

Verification of 10-years life time for  
**LG Direct Drive Motor**  
Type no. 110c1-AL

Life time tested  
Direct Drive Motor  
2,200 cycles  
(10-years life time)

Tested by VDE Germany

The Direct Drive motor for the washing machine  
manufactured by LG Electronics  
has no defects during a full 2,200 cycles  
and has been verified to endure a 10-year lifespan.

\*Detailed test conditions are on the back.

With less vibration, less friction and more stability we've increased the life span of the motor, and ensured that your clothes get better care and a longer life. Also, you save more energy and deliver ultimate standards of washing and hygiene to your family.

# Better Care. Better than hand wash.

6 MOTION DIRECT DRIVE  
Wash Wisely. Wash Effectively.

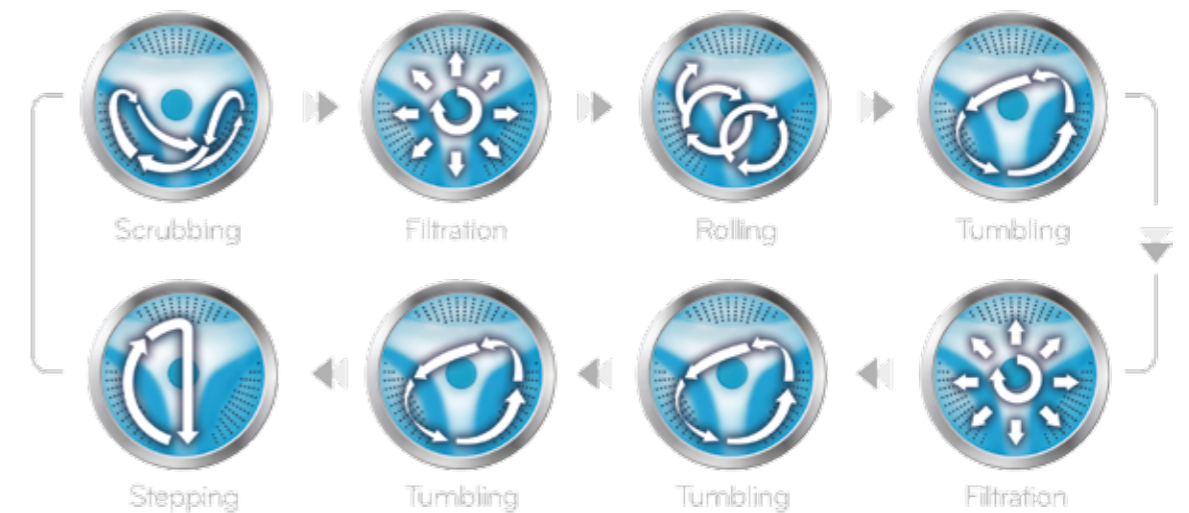

When doing laundry, you might have seen that the inner drum always tumbles in a monotonous motion no matter what the fabric type is. Don't you think that your washing machine should adopt a different movement for each fabric type? Well, that's why people prefer hand washing for certain types of fabric. Our range of washing machines with 6 Motion Technology understands your clothes like you do, and offers a different wash for different clothes.

## How the six motions combine to give a superior wash and better care?

After loading the machine with clothes just turn the knob to the type of fabric and this smart technology will take care of the rest by combining the different washing motions to provide optimum washing.

Example: Below we have shown the process of washing for a cotton fabric.

\*When compared to a washing machine with a conventional motor.

STEAM THAT CLEANS.  
STEAM THAT CARES.

## LG Steam Washer Dryer with 6 Motion Direct Drive Technology

If you love your clothes, you'll never compromise on their cleanliness. And what better way than steam to ensure that?

### With Steam Wash you can:

- Ensure a hygienic and gentle wash
- Get wrinkle-free clothes
- Get rid of any kind of bad odour
- Say no to any detergent related allergies
- Eliminate all germs, mites and allergens
- Enjoy the silent wash

British Allergy  
Foundation

**MOTION DD** Direct Drive

## The Power of Steam

LG's innovative Steam Washer Dryer uses heat and motion energy of water vapours to deliver the most hygienic and effective wash. Combined with Inverter Direct Drive technology, it becomes the most powerful yet peaceful machine for your laundry.

### STEAM GENERATOR

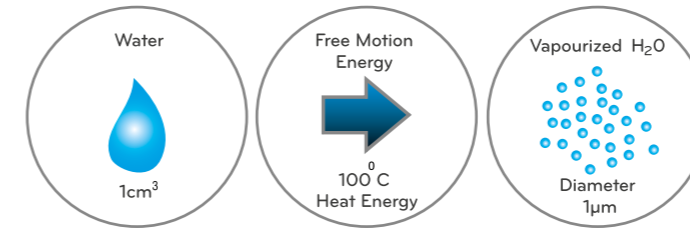

The Steam Generator that converts water into steam takes washing technology a step further. Since the water is heated directly, it uses less water and energy to create steam than it does to boil the water at the bottom of the drum. So now you can now enjoy doing your laundry without worrying about the high electricity costs or your machine's loud noise.

## Better Washing Performance: Steam cleans better than water

### How is steam generated?

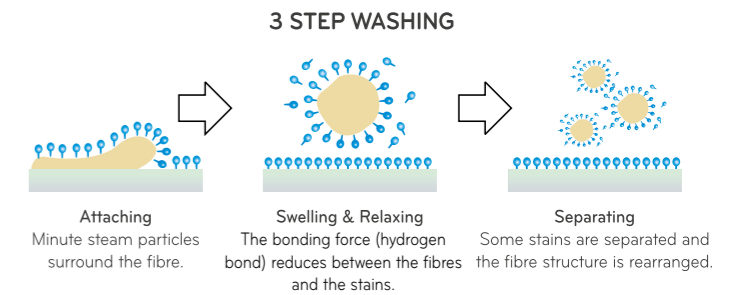

Water converts into steam under increased temperature conditions. It takes the form of warm vapour that has more heat and motion energy than water. Therefore, the use of steam in washing makes all the difference. The hot vapour envelopes the clothes, resulting in an effective and a thorough wash.

The cubic volume of steam vapour at 100°C is 1600 times more than that of liquid at 25°C. Such an increase in energy leads to effective washing.

### Why steam?

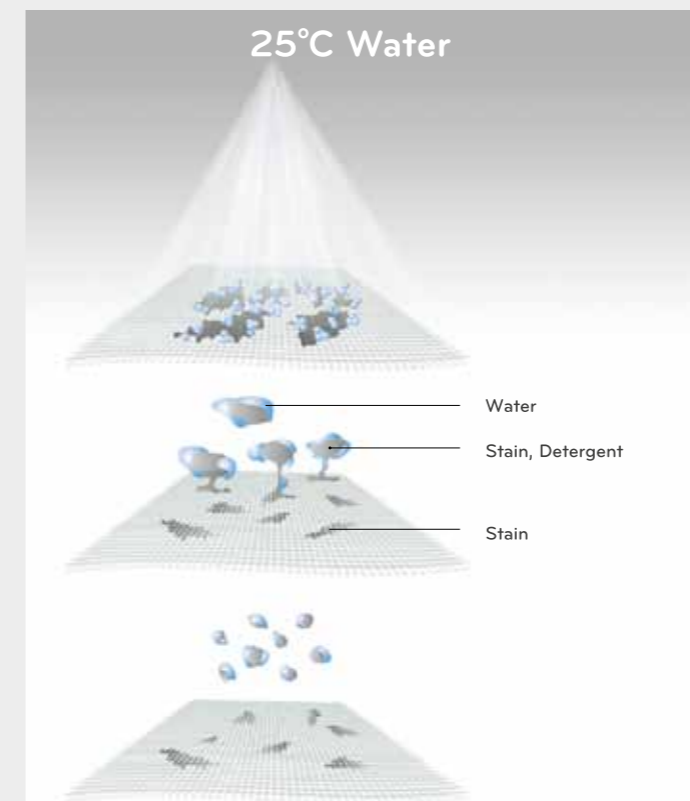

- Easily transmits heat and humidity due to its minute scale and mobility.
- Easily removes odour particles due to its strong absorption force.
- Easily reduces static electricity in clothes due to steam's nature of having negative(-) ions.
- Easily relaxes the bonding force between cloth fibres and stains due to the swelling effect of each fibre.

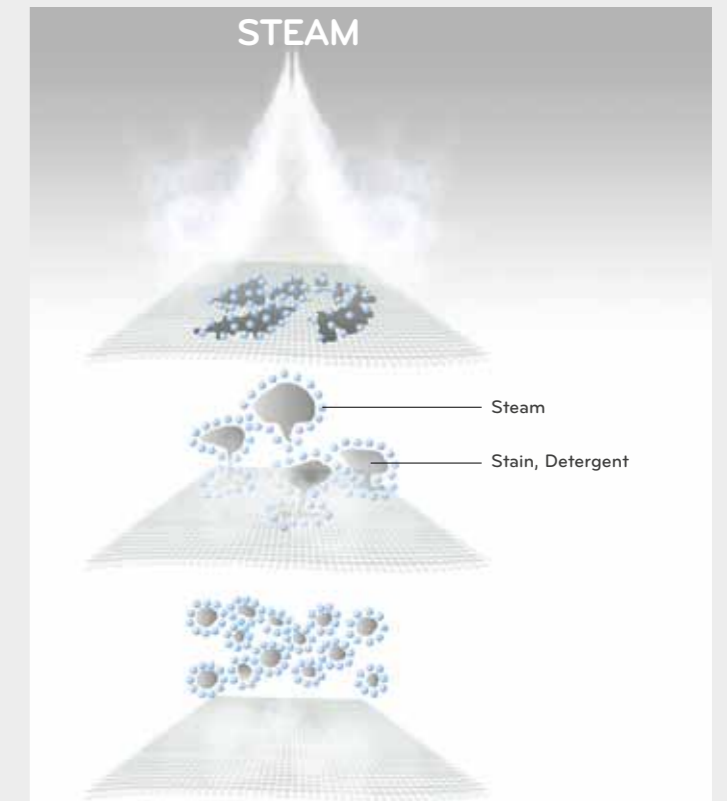

### STEAM WASHING

Steam rapidly delivers heat energy and water directly to the clothes.

#### CONVENTIONAL

#### LG STEAM WASHER DRYER

## Allergy Care

The unique optimum steam temperature and rinsing function enables the Steam Washer Dryer to remove major allergens effectively. House dust mites, pet fur and pollen found on clothes are eradicated while washing. What you get are thoroughly disinfected clothes that stop any form of allergy.

### 3 STEP PROCESS

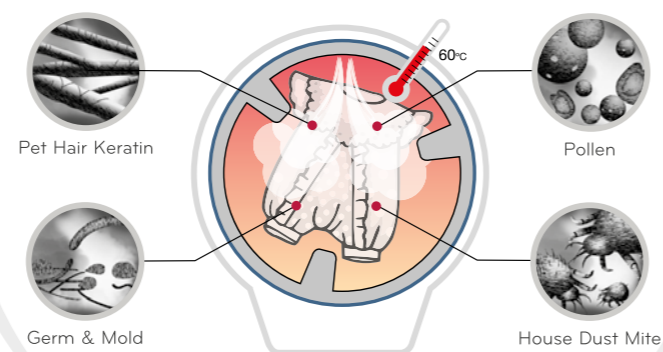

#### Step 1: Allergen Sanitization

Atomized steam (1/600 of water size) penetrates each corner of the cloth fibre and sanitizes the allergens.

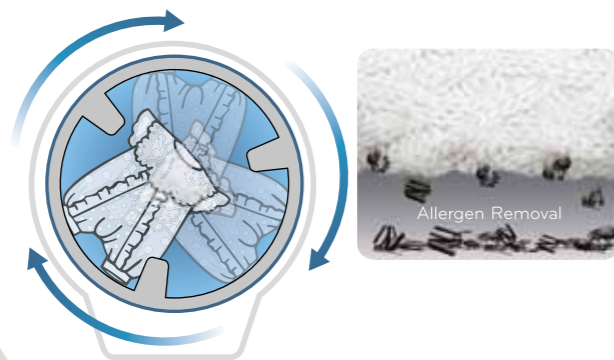

#### Step 2: Allergen Dissolution

Detergent water circulation loosens the allergens from clothes and the steam keeps an optimal temperature of 60°C for allergen dissolution.

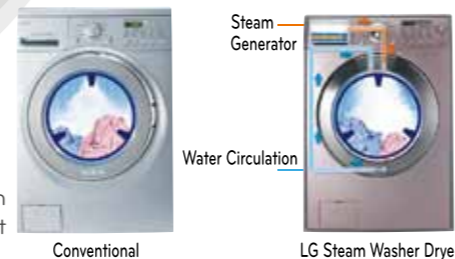

#### Step 3: Allergen Removal

High spinning power drains allergens out.

## Dual Spray System

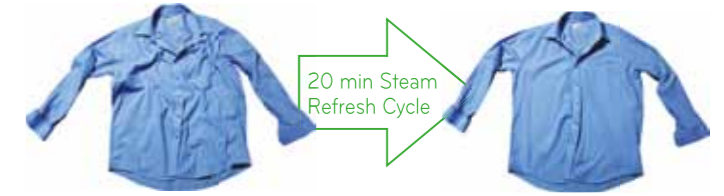

The Dual Spray System reduces water and energy consumption. It uses less water to wash the laundry. It also sprays both water and steam continuously onto the clothes throughout the wash cycle, improving the washing performance.

## Refresh with Steam

The LG Steam Washer Dryer refreshes your clothes in just 20 minutes.

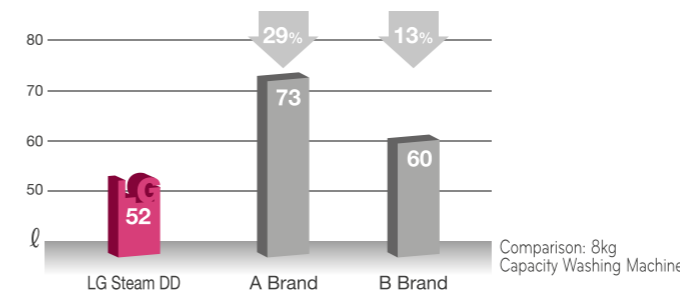

The steam smoothens out the creases and wrinkles and with its penetrating power removes bad odour too. It also leaves your clothes feeling refreshed. It is ideal for clothes like business shirts that may not be dirty at the end of the day but may have creases and a musky smell.

Evaluation by AATCC Standard Tested on: Clothes: Dress Shirt 3ea  
• Fabric: Cotton 75% + Polyester 25%

## Water and Energy Saving

With our new Steam Generator technology, you get remarkable savings in water and energy consumption.

### Water Saving

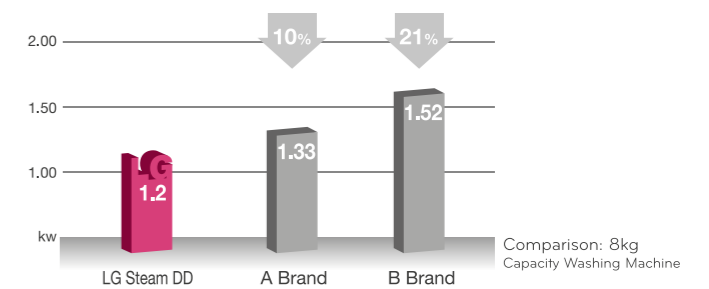

Since steam delivers energy for washing more efficiently than water, you can reduce the amount of water needed for your laundry. Also, the small particles of steam penetrate into the clothes more rapidly and efficiently, reducing water consumption and improving washing performance.

The LG Steam Washer Dryer reduces water consumption by up to 29% as compared to a conventional washing machine with an 8kg capacity.

### Energy Saving

Steam heats the drum and laundry more rapidly and efficiently. Now you can save electricity since there is no wastage of heated water.

The LG Steam Washer Dryer reduces up to 21% of energy consumption as compared to a conventional washing machine with an 8kg capacity.

18% Energy Saving as compared to Class A+. LG Steam DD is the A+++ washing machine.

LG Steam Washer Dryer has been awarded the Green Label by the Singapore Environment Council. It is less harmful to the environment in terms of manufacturing, use and disposal. The manufacturing materials are environment-friendly and use less water and energy.

LG Steam Washer Dryer is rated excellent in water efficiency by the Singapore Public Utilities Board. You can save both water and money when using the LG Steam Washer Dryer.

Certification

The unique optimum steam temperature and rinsing function enables the Steam Washer Dryer to remove major allergens effectively. House dust mites, pet fur and pollen found on clothes are eradicated while washing. What you get are thoroughly disinfected clothes that stop any form of allergy.

Tub Clean

Constant use of a washing machine results in the development of fungus and toxic substances in the tub. However, the Tub Clean function in a Steam Washer Dryer uses hot steam with high spin speed to sterilize every corner of the tub. The tub remains disinfected and so do the clothes.

Warm Water Rinse

Only LG Front Loading Washing Machines have a Warm Water Rinse function, which minimises the chances of detergent remaining in the tub at the end of every wash cycle. It greatly reduces the chances of allergy.

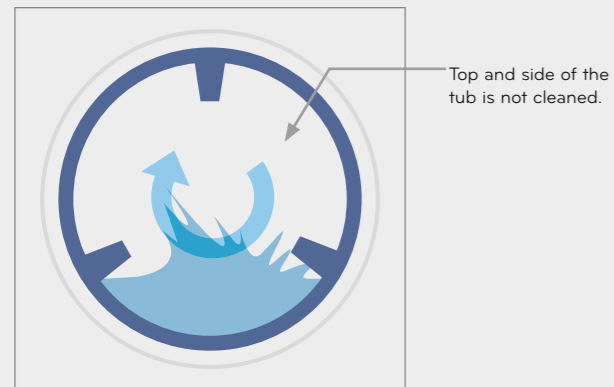

Sterilization

The temperature in the drum of the Steam Washer Dryer goes up to 100°C during every wash. It can effectively kill bacteria such as Staphylococcus and Coliform, which can cause diarrhoea and at times, even lead to food poisoning.

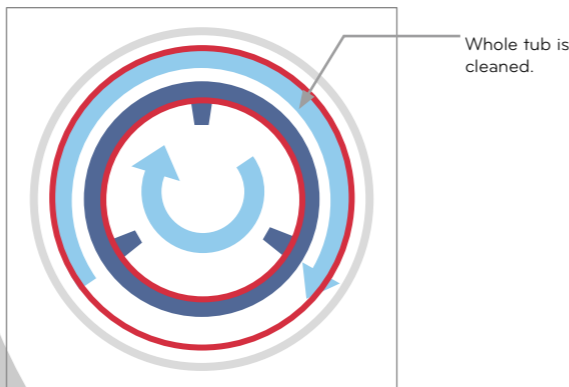

CONVENTIONAL TUB CLEAN

Drum can be washed but the tub is left dirty. The RPM is not fast enough.

LG TUB CLEAN

The tub is cleaned with water at 85°C, sterilizing the tub and the drum. After which, high RPM speed is applied to remove all dirt and water stains.

Washer Dryer

**6 MOTION DD** Direct Drive

## LG Washer Dryer with 6 Motion Direct Drive Technology

No matter how constant the downpour, drying clothes won't be a problem anymore. LG Washer Dryer's unique combination of washer and in-built dryer gives you ready-to-iron clothes right after wash. And because of the 6 Motion Technology you can freely wear whatever you want even when it rains, as it offers the perfect wash for your favourite clothes. So go on, enjoy the rain.

## Benefits of LG Washer Dryer

### Reason 1 - Convenience

Automatically takes care of both the wash and dry process, without making any noise.

*"So I don't have to come back to the machine between the wash and dry stages. Thanks to IDD because it ensures a noiseless wash, every time."*

- No concern about leaving damp clothes in the washer
- Weather independent
- No pollen or dust particles to clear away
- Do not have to hang clothes out on the clothesline

### Reason 2 - Space Saving

Washer and dryer combined into one unit saves space. The efficient IDD technology saves you your peace of mind.

*"My house doesn't have enough space to keep both, washer and dryer in it. I can't stand the loud vibrating sound a conventional machine makes."*

### Reason 3 - Low Humidity

Condenser dryer in combination unit does not re-circulate humidity back into the laundry.

*"This unit does not exhaust air into the room; therefore no humidity is created from this dryer. And the low frictional noise ensures me my share of calm."*

- No wet and dusty walls and floors
- No growth of mold and mildew

### Reason 4 - Low Noise Level

Condenser dryer is quiet in comparison to ventilation dryers.

*"Because this unit does not use exhaust air, there's less noise than conventional dryers. And because it uses IDD technology, there's less noise and more silent moments."*

- The Inverter Direct Drive motor ensures quiet operation in both the wash and dry cycles
- No large element or noisy fan like a ventilation dryer

### Reason 5 - Cost Efficient

More cost-efficient than buying two machines separately.

*"It is more cost efficient than buying a condenser dryer and a washing machine separately."*

The Inverter Direct Drive motor ensures quiet operation in both the wash and dry cycles

## LG Washer with 6 Motion Direct Drive Technology

A smart machine that understands you and takes great care of your clothes. With its advanced features, not only do you get less noise and vibration but also less hassles. Now leave your delicate clothes and expensive designer wear to this intelligent machine, because it understands the difference of fabrics and delivers a wash that's not the same, but better than hand wash.

 **MOTION DD** Direct Drive

 **Green Health**  
Upgrade your life in every way

## WASHER - INVERTER DIRECT DRIVE

### Fuzzy Logic

Advanced Fuzzy Logic Technology senses the wash environment and adjusts the wash cycle automatically to give your clothes the perfect wash.

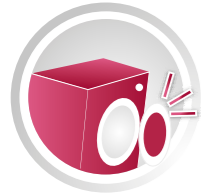

#### Water Level Sensor

With the option of 9 different water levels, the machine chooses the one that best suits your wash load. It gives your clothes a better wash and rinse while saving water and electricity.

#### Load Imbalance Sensor

Detects uneven distribution of clothes and immediately stops the spin action, redistributes the clothes evenly and then continues with the spin function. This prevents machine damage.

#### Door Open Sensor

While the machine is in the operating mode, its sensors ensure the door is properly shut. If the door is open, the machine stops, preventing any damage.

#### Laundry Load Sensor

After sensing the laundry load, the machine automatically adjusts the wash cycle to give you a perfect wash.

### Other Unique Features

#### Baby Care

This feature helps remove detergent residue from your clothes. Temperatures reach up to 95°C during the wash cycle ensuring that you get the most hygienic and clean wash every time.

#### Bio Wash

Washes at 40° C for 15 minutes for maximized action of the enzymes in the detergent. The temperature is set to your selected level to remove stubborn stains.

#### Quick 30

Wash, rinse and spin clothes in only 30 minutes.

#### Rinse Plus

Used to introduce an additional rinse cycle which assists in removing traces of detergent residue.

#### Digital Display

Smart and handy, so you can take it easy. Keeps you aware of the status of the wash cycle.

#### Rinse Hold

After a rinse, clothes stay suspended in water without entering into the spin mode. Prevents foul smell and gives you the flexibility for an additional rinse.
